Effectiveness

The effectiveness of the group 7th was a 100%, they have found the 11 bugs of out 11 intentional bugs.

Table of contents

Use case <CODE> <NAME>	¡Error! Marcador no definido.
Additional tests.....	¡Error! Marcador no definido.

For every use case in which you have included an intentional bug, add a page with the following structure.

1.- Bug in use case UC02 – Create Newspaper

Description

We can create a private newspaper with a price less or equal than zero.

Results

We can see in the view form of creating that newspaper that the message error of that part (price) is not resulting, so we can introduce a negative decimal number and get a negative price for that private newspaper as a result.

2.- Bug in use case UC29- Display a private Newspaper

Description

When we display a newspaper, the display of the list of its article doesn't appear the summary of them.

Results

The table only contains the information of the title and writer of each article.

3.- Bug in use case UC04 – Create article

Description

We can create an article without a summary.

Results

We can see in the view form of creating/editing that article that the message error of that part (summary) is not resulting if we click on "save" leaving all blank. So we can not introduce anything for that box and create/edit an article that was not saved as final mode.

4.- Bug in use case UC09 – Search newspapers by keyword

Description

The search of the newspaper doesn't work well, it always returns all available newspapers.

Results

We can see in the view of searching a newspaper that we can let it blank and click "search" and the system will return all the newspapers public (and published) that are in the system. So the mechanical configuration of finding a newspaper with an exactly keyword will not work.

5.- Bug in use case UC34 – Create advertisement in newspaper

Description

We have interchanged the labels of "Year" and "Month" in the edit/create view of an advertisement.

Results

We can see in the view form of creating/editing that the message errors of those boxes are interchanged. So if we put a year bigger than '12' or/and we put a month lower than '2018', the system will show error messages.

6.- Bug in use case UC12 – Display dashboard

Description

We have remove one label of information in the dashboard.

Results

In the view of the dashboard doesn't appear the information linked to the standard desviation of chirps per user.

7.- Bug in use case UC14 -Post a chirp

Description

We have remove the restriction of "SafeHTML" in the description of a chirp.

Results

Any user can create a chirp with scripts that affects to the system. For example:
“<script>alert('HACKED');</script>”.

8.- Bug in use case UC14 -Post a chirp

Description

We have modified the creation date of chirps on the system. We have subtract 86400 seconds to the local time of our system.

Results

We can see in the view of chirps that the one that we have created is before of others because has an wrong creation date; that is a day before of the real creation (24h).

9.- Bug in use case UC19,20,21- Manage taboo words

Description

We have modified the security of the URLs that have a relation with the taboo words, making possible that an agent can enters there and have special access.

Results

An agent can enter by URL to manage the taboo words that contains the system.

10.- Bug in use case UC44 – Delete a message

Description

We have made that if you want to delete a message, now you don't need to introduce it into trash box before of it.

Results

We can click 'delete' in the edit view of the message and it will be directly removed from the system.

11.- Bug in use case UC42 – Send a message.

Description

We have changed the messages of “Open” a folder and now both messages are in Spanish.

Results

We can see that in the list of folders of the actor, the link to open a folder is always “abrir” instead of the language that we are using.
